

HIGH VISIBILITY

INDUSTRY LEADING HIGH VISIBILITY FABRICS

C469 198

T602 144

A790 735

This extensive range of high visibility clothing meets the stringent requirements in both design and construction, to ensure that it meets the latest international high visibility standards EN ISO 20471, ANSI/ISEA 107, and AS 4602.1.

Portwest Extreme™ is a premium high performance rainwear fabric constructed from 100% Polyester, 300D Stretch Oxford 200g and offers superior comfort, function and endurance in all weather conditions. Waterproof, breathable and windproof to the highest standards, this fabric far exceeds the requirements of EN 343 Class 4:4.

Made with 300 Denier 100% Polyester yarn, this is a tough fabric for tough conditions. 300D 190g fabric has superb abrasion and tear resistance. The double coating of polyurethane (PU) on the inside makes the fabric durable and waterproof. And the outer has a water and stain repellent coating which helps keep the garment clean. 300D Oxford Weave is available with both a breathable (300D Breathable) and non-breathable (300D Industry) double polyurethane coating.

Sealtex™ Ultra is a highly breathable, high technology PU coated fabric, on a flexible 100% polyester tricot knit, 185g. Sealtex Ultra meets high visibility standard EN ISO 20471. Waterproof, windproof and breathable, we guarantee this range will keep you warm and dry in adverse conditions. The welded seams keep rain and wind out and the durable, stretchy fabric can easily be wiped clean, allowing the garments to look good and last for longer.

Cotton Comfort fabric is manufactured from a 55% cotton, 45% polyester 175g fabric with cotton on the inside for comfort and polyester on the outside for maximum durability. The cotton/polyester mix ensures that the fabric is highly breathable and that a comfortable temperature is maintained at all times.

The Vest-Port™ fabric is made from a durable 100% Polyester warp knitted fabric which is fully certified to the latest High Visibility standard. The fabric is lightweight, comfortable and highly breathable. It can be worn over layers to ensure total visibility without adding bulk.

PORTWEST EXTREME, SEALTEX and VESTPORT are trademarks of Portwest.

HIGH VISIBILITY TESTED TO EXCEED STANDARDS

Can you be sure your garment conforms to EN ISO 20471?

A certificate from a test house guarantees that the garment or fabric sent to the test house has attained a standard. It is not a guarantee that bulk production meets the standard.

However, in our factories, we test every roll of fabric and retroreflective tape with highly specialised equipment to guarantee that all production meets the EN ISO 20471 standard, not just a garment that was sent to the test house.

EN ISO 20471 states the retroreflectometer reading should not be below 330 (cd/lx.m²) however we insist on a reading of 400 (cd/lx.m²) plus.

Fabric Testing

In our quality control laboratory, we use a Minolta Spectrophotometer to check every roll of fabric. This guarantees the fabric we use is fully compliant with the EN ISO 20471 standard.

RETRO REFLECTIVE TAPE

HiVisTex™ PRO

HiVisTex

Our brands include HiVisTex tape and HiVisTex Pro segmented tape. The spaces in HiVisTex Pro segmented tape allow for increased breathability and is much more flexible allowing stretch fabrics to move with the wearer.

Manufactured using premium glass bead technology that surpasses all standards in terms of manufacturing quality, washability, wear resistance and durability.

Reflective properties that last 50 home washes

The minimum requirement for washability under EN ISO 20471 is 5 washes.

We know that many hi-vis tapes lose their reflective properties after 25 washes and some tapes last just the required 5 washes. With a Portwest high visibility garment, you can be certain our HiVisTex retroreflective tape will last through 50 washes ensuring ultimate visibility in low light conditions wash after wash*.

*Washing instructions on the garment label must be adhered to.

TESTED TO PERFORM IN EXTREME COLD

EN 342 STANDARD AND THERMAL MANIKIN TESTING

EN 342

We test our garments to ensure workers are protected in the extreme cold.

The principal test in EN 342:2017 uses a heated manikin. During the test, the manikin is heated to and maintained at a specified temperature. Thermal insulation is determined from the power required to maintain the manikin surface at this constant temperature. The resulting effective insulation value is used to classify the performance of the garment.

It can also be used to estimate the maximum duration of wear based on the activity level of the wearer, the temperature of the environment and the insulation value of the clothing. Clothing claiming to meet the requirements of EN 342 must be marked with the pictogram shown below.

THE MOST ADVANCED COMPLETE GARMENT TEST

EN 343 PROTECTIVE CLOTHING, PROTECTION AGAINST RAIN

EN 343

This European standard specifies requirements and test methods applicable to readymade garments, materials and seams of protective clothing against the influence of precipitation e.g. rain, snowflakes, fog and ground humidity.

The standard provides 2 performance parameters and an optional test:

- Water penetration resistance (4 levels)
 1. Minimum level of rain protection
 2. Intermediate rain protection
 3. Very good rain protection
 4. Highest level of rain protection
- Breathability (4 levels)
 1. Not classed as breathable under EN 343
 2. Intermediate breathability
 3. Very good breathability
 4. Highest level of breathability
- Optional readymade garment rain tower test (R)

READYMADE GARMENT RAIN TOWER TEST

EN 14360 PROTECTIVE CLOTHING - TEST METHOD FOR READYMADE GARMENTS

Impact from above with high energy droplets.

Garments are placed over data sensitive recording manikins and exposed to rainfall simulation of 450 litres/m²/h for a minimum of one hour.

EN ISO 20471

This International Standard specifies requirements for high visibility clothing, which is capable of visually signalling the user's presence. The high visibility clothing is intended to provide conspicuity of the wearer in any light condition when viewed by the operators of vehicles or other mechanised equipment during daylight conditions and under illumination of headlights in the dark.

High Visibility clothing has a fluorescent surface, combined with reflective material that meets certification requirements in 3 different classes:

Class 3: Highest Level

Highest level of protection - required for any persons working on or near motorways or dual-carriage ways or airports. Must incorporate a minimum of 0.80m² of background material and 0.20m² of retro-reflective materials. (4 metres of 5cm wide reflective tape)

Class 2: Intermediate Level

Required for any persons working on or near A and B class roads, also for delivery drivers. Must incorporate a minimum of 0.50m² of background material and 0.13m² of retro-reflective material. (2.60 metres of 5cm wide reflective tape)

Class 1: Minimum Level

Minimum level of protection required for any persons working on a private road or to be used in conjunction with a higher classed garment. Must incorporate a minimum of 0.14m² of background material and 0.10m² of retro-reflective material. (2 metres of 5cm wide reflective tape)

Class 2

Class 1

= Class 3 Ensemble

EN ISO 20471 Class 3 Ensembles

There are two ways to attain EN ISO 20471 Class 3 at Portwest. Either choose an EN ISO 20471 product that is rated Class 3 on its own or choose two products that together are Class 3 certified.

The following are examples of Portwest Class 3 Certified Ensembles:

TX70 + TX72 = EN ISO 20471 Class 3 Ensemble
S478 + TX71 = EN ISO 20471 Class 3 Ensemble
T501 + T181 = EN ISO 20471 Class 3 Ensemble
T501 + T180 = EN ISO 20471 Class 3 Ensemble

ANSI/ISEA 107

ANSI/ISEA 107 is the American National Standard for High Visibility Safety Apparel and Headwear. The industry standard developed by the American National Standards Institute provides a uniform, authoritative guide for the design, performance specifications and use of high visibility and reflective apparel including vests, jackets, bib/jumpsuit coveralls, pants and harnesses. Garments that meet this standard can be worn 24 hours a day to provide users with a high level of conspicuity through the use of combined fluorescent and retro-reflective materials.

ANSI/ISEA 107 has 3 garment types indicated below:

ANSI/ISEA 107 TYPE O CLASS 1 for Off-Road Use

ANSI/ISEA 107 TYPE R CLASS 2 for Roadway Use

ANSI/ISEA 107 TYPE R CLASS 3 for Roadway Use

ANSI/ISEA 107 TYPE P CLASS 2 for Public Safety

ANSI/ISEA 107 TYPE P CLASS 3 for Public Safety

AS 4602.1

The AS 4602.1 Standard specifies the visual requirements for high visibility safety garments for occupational wear by people who may be exposed to the hazard of moving traffic, moving plant or equipment in high risk situations. The standard covers garments suitable for daytime wear, night-time wear where they will be seen by retroreflected light or for wear under both conditions but excludes garments for use by fire services.

The garments specified in this standard are classified as follows:

Class D

A garment designed for daytime use.

Class N

A garment designed for night use using retro reflected light.

Class D/N

A garment designed for day and night use.

AS/NZS 1906.4

This Standard specifies the requirements for high visibility materials and reflective tape to be used on industrial safety garments for outdoor daytime use and for use at night or in other dark conditions where the wearer needs to be highly visible.

EN 17353 - Enhanced visibility equipment for medium risk situations

The EN 17353 standard is applicable to clothing and devices worn in medium risk situations such as working with slow-moving vehicles and in areas of work where high risk (EN ISO 20471) high visibility clothing is not required. Garments and devices are permitted for use in daylight (day) conditions only, dark (night) conditions only, or for both daylight and dark conditions.

Type A: Equipment for Daylight

Equipment is worn by users where the risk of not being seen exists only in daylight conditions. This equipment uses only the fluorescent material as an enhanced visibility component

Type B: Equipment for dark conditions

Equipment worn by users where risk of not being seen exists only in dark conditions. This equipment uses only the retroreflective material as an enhanced visibility component

Type AB: Equipment for daylight, twilight and dark conditions

Equipment worn by users where risk of not being seen is present in daylight, twilight, and dark conditions. This equipment uses fluorescent material as well as the retroreflective material and/or combined performance materials as enhanced visibility components.

The standard replaces EN1150 and EN13356 standards. For high-risk situations see EN ISO 20471.

RIS-3279-TOM

RIS-3279-TOM Issue 2 Railway Industry Standard (RIS) sets out the minimum specification for high visibility warning clothing in the rail industry

EN 510 - Protective Clothing for use where there is a Risk Of Entanglement from Moving Parts

This standard specifies the properties of protective clothing that minimise the risk of its entanglement or drawing-in by moving parts when the wearer is working on or near hazardous moving machines or devices.

EN1150

EN 1150 - Visibility Protective Clothing for non-professional use

This European standard specifies the optical performance requirements for high visibility clothing to be worn by adults and by juveniles, and designed for non-professional use.

OEKO-TEX®

High visibility fabrics tested to OEKO-TEX® STANDARD 100 guarantees the fabric does not contain any harmful substances detrimental to human health.

EN 13356 - Visibility Accessories for Non Professional Use

This standard specifies the optical performance requirements for accessories which are to be worn, attached to or carried by people and designed for non-professional use. Visibility accessories complying with this standard are intended to signal the users presence visually when illuminated by vehicle headlight on dark roads.

ISO 13688 - PROTECTIVE CLOTHING - GENERAL REQUIREMENTS

This international standard specifies general requirements and recommendations for ergonomics, ageing, sizing and marking of protective clothing, and for information supplied by the manufacturer.

Every certified garment in this brochure is also certified to ISO 13688. This standard replaces the old EN340 standard.

EN 14058 - PROTECTIVE CLOTHING- GARMENTS for PROTECTION AGAINST COOL ENVIRONMENTS

This standard specifies requirements and test methods for the performance of single garments for protection against cooling of the body in cool environments. Cool environments are as a result of a combination of humidity and wind at temperatures of -5°C and above.

At moderate low temperatures garments against local body cooling are not only used for outdoor activities but can be used for indoor activities. In these cases garments often do not need to be made of watertight or air impermeable materials. Therefore, these requirements are optional for this standard.

PORTWEST PWR High Visibility series is constructed from state-of-the-art high performance waterproof and breathable Portwest Extreme fabric.

Using innovative technology, the base fabric has been engineered to provide a technical barrier against the elements providing the maximum waterproof, breathable and windproof protection which far exceeds the current highest Class 4:4 requirements for EN 343.

In addition, the microporous fabric delivers exceptional stretch characteristics ensuring outstanding flexibility for the wearer. The exterior fabric surface is treated with a Texpel finish to protect against water and oil stains.

MADE WITH

PWR AND PORTWEST EXTREME ARE TRADEMARKS OF PORTWEST.

PS55 807

S593 181

EXTREME WATERPROOF, BREATHABLE AND WINDPROOF PERFORMANCE

HOW PORTWEST EXTREME FABRIC TECHNOLOGY WORKS:

- 1 DURABLE WATER REPELLENT TREATED OUTER FABRIC
- 2 WATERPROOF AND BREATHABLE MEMBRANE
- 3 BREATHABLE INNER LINING

WATERPROOF over 11,000mm

EXTREME WATERPROOFNESS

Portwest Extreme achieves over 11,000mm hydrostatic head, equivalent to over 11 metres of water column.

(ISO 811:2018 Determination of resistance to water penetration. Hydrostatic pressure test).

HIGH PERFORMANCE TESTING

EN 14360 Protective Clothing – Test method for ready-made garments – Impact from above with high energy droplets.

Garments are placed over data sensitive recording manikins and exposed to rainfall simulation of 450 litres/m²/h for a minimum of one hour. All garments within the PWR Hi-Vis series have been rain tower tested.

BREATHABILITY over 50,000g/m²/24hrs

WORK HARD IN COMFORT

The higher the g/m²/24 hours the more breathable the fabric is. (JIS L1099:2012 Method B1 Water vapour permeability). Portwest Extreme achieves the highest rated breathability levels.

DURABLE 12 x stronger than standard HIGH TENSILE STRENGTH

Portwest Extreme exceeds the recognised standard requirement of 100N warp and weft under the most up to date version of the EN ISO 20471 standard

PORTWEST®

PLANET

Portwest is delighted to introduce a collection of environmentally friendly high visibility products. These eco garments are made from certified recycled fabrics, with sustainably sourced packaging and labels.

These styles deliver all the function and design that Portwest is known for, allowing the wearer to champion sustainability without compromising on performance.

Our fully owned factories are compliant with WRAP and SMETA standards of socially responsible production. Our Eco High Visibility garments are ethically produced in one of our fully owned factories, that is compliant with WRAP and SMETA standards of socially responsible production. In addition, it is ISO 14001 environmentally accredited, chemically compliant by OEKO-TEX® STANDARD 100, and quality management assured by ISO 9001.

GLOW TEX™

Portwest Glowtex™ Triple Technology uses the latest innovation in light emitting technology to ensure the wearer achieves the highest level of protection in high visibility apparel.

AFTERGLOW LASTS UP TO 6 HOURS BEFORE IT IS FULLY DISCHARGED

Brightly coloured fluorescent background fabric for complete conspicuity in daylight.

Very high performance HiVisTex retro reflective tape which bounces light back to the source and allows for superior visibility of the wearer in all weather conditions.

Light emitting Glowtex phosphorescence tape which accumulates the light in well lit places and emits light in very low or no light conditions - ie it glows in the dark. Lasts up to 6 hours once illuminated.

GLOWTEX is a trademark of Portwest.

HIGH INDUSTRY LEADING HIGH VISIBILITY FABRICS **VISIBILITY** **WORKWEAR AND** **LEISUREWEAR**

This great value workwear range is functional, comfortable to wear, fits extremely well and is suitable for multiple working environments. The colours and styles offered are perfect for corporate branding. Each garment has been carefully designed to include key features such as ergonomic kneepad pockets, secure storage pockets, rule pockets and twin stitched reinforced seams for extra durability.

These garments are made from durable, stain resistant 65% Polyester, 35% Cotton 245g Kingsmill™ fabric. This tough premium certified fabric guarantees high performance and maximum wearer comfort.

Texpel™ SOS, Splash, Oil and Stain is a premium fabric finish which repels oil and liquids, causing them to bead up and roll off the fabric surface. The finish also helps release stains in the washing process, keeping garments looking cleaner for longer.

Texpel™ Wicking is a premium fabric finish which wicks moisture away from the skin to keep you fresh and comfortable. Offering powerful protection from stains, the fabric blocks bad odours and provides enhanced breathability.

Cotton Comfort fabric is manufactured from a 55% cotton, 45% polyester 175g fabric with cotton on the inside for comfort and polyester on the outside for maximum durability. The cotton/polyester mix ensures that the fabric is highly breathable and that a comfortable temperature is maintained at all times.

The Portwest high visibility MeshAir™ fabric is lightweight and fully breathable making it ideal for working in warmer conditions. The open mesh fabric uses an advanced open knit construction which provides full airflow around the body and excellent ventilation. The MeshAir high visibility fabric is fully tested and certified to EN ISO 20471.
