

# 5 . SEMI CIRCULAR TYPE TENTS

- Water resistant siding canvas, non-flammable insulating material and anti-bleeding primer felt is used.
- In manufacturing of iron skeleton, pipe and section material are used which are produced from galvanized sheet.
- Thanks to its semicircular shape, the structure is resistant to load of snow and wind.
- As the heights of semicircular type constructions are increased, number of rooms can be increased by adding middle sections. Thus, it provides shelter opportunity for more families during disaster and afterwards.
